

ENVIRONMENTAL PROJECT ENGINEER POSITION

Somat Engineering, Inc. (Somat) has immediate openings for environmental project engineers in our Southeast Michigan offices. We are seeking energetic and personable experienced engineers who are interested in growing their career in this field.

Somat is a diverse group of professionals that delivers sustainable infrastructure solutions and services for a better tomorrow. We specialize in geotechnical, construction, civil, and environmental engineering and construction materials testing; and are known for our excellence in service, quality, and doing the right thing.

We are looking for environmental project engineers that bring strong analytical skills, solution-oriented knowledge, and collaborative attitudes that seek to apply great creativity to projects. They will collaborate closely with other engineers and project managers to translate creative vision into functional designs and processes. Some of the types of activities that they will be involved with are:

- Coordination of all technical environmental activities on assigned projects
- Plan, schedule, conduct, and coordinate assigned phases of the engineering work in the field and office
- Performing Phase I and II Environmental Studies and Baseline Environmental Assessments (BEA)
- Documentation for Due Care and Compliance (DDCC)
- Brownfield Sites
- Decontamination and demolition
- Remediation of soil and groundwater
- Contaminated site cleanup and closure of site under various exposure pathways and use of site after remediation per applicable state regulations
- Monitor work for compliance to applicable codes and accepted engineering practices and standards
- Field verification of design parameters for construction and remediation
- Documentation of field and laboratory data
- Attend project/progress meetings when requested
- Direction and oversight of junior project engineers
- Cost estimates, bid letting, and contracting documents
- Managing and tracking project budgets
- Preparation of technical reports, project specifications, and operation and maintenance manuals
- Document creation with Microsoft Office (Word, Excel, PowerPoint)
- Other duties as assigned

This position will require some out-of-town work assignments depending on the project requirements.

Qualifications

- Registered Professional Engineer (PE) – Michigan preferred
- 5 to 8 years of environmental engineering experience in the private and public sectors
- BS or MS in Civil or Environmental Engineering
- Experience in the environmental markets in office locations
- Laser Induced Fluorescence (LIF) and Ultra Violet Optical Screening Tool (UVOST) experience highly preferred
- Willingness to become involved in the engineering community by giving presentations and participating in societies and groups
- Strong written and verbal communications skills
- Experience collaborating and maintaining relationships across offices
- Demonstrates motivation to modify schedule as required to meet deadlines and/or client needs
- Legal authorization to work in the United States
- Insurable driving record

Somat prides itself on performing any task with promptness and quality, which our clients have grown to know and expect. Somat employs some of the most experienced engineers in Michigan and Ohio, providing years of knowledge to both our clients and our employees.
